

## Grid Melt Systems

Grid Melting systems are becoming in more demand for more and more products that are not the "common" hot melt applications. The Mahr custom grid melter has the capability to melt at higher temperatures than the common Stainless Steel melts on today's market. Couple these capabilities with a positive displacement gear pump and the possibilities are endless

- Continuous metered flow
- Nitrogen blanketing
- Vacuum degassing
- Temperatures to 425°C
- Start/stop recirculation loop controls
- Complete process data logging
