

Lab Equipment

Mahr Metering Systems understands that your manufacturing processes are constantly evolving. Your R&D testing equipment must keep pace with tomorrow's technology. Mahr Metering Systems has been providing advanced R & D Prototyping Systems since 1992, many of which are still in use today. The MiniMax™ Prototype System can replicate your complete manufacturing process.

- Systems use a touch screen interface for easy input, recall and editing of formulations
- Systems provide a detailed data log of each test shot with Complete test certification of mix ratios and material handling conditions
- Systems are built using Mahr's German manufactured precision gear pumps with accuracy levels of $\pm 1\%$
- Systems process compounds that can be highly corrosive or abrasive, liquids with high solids content, powder introduction into the liquid stream, as well as providing very low or very high shear mixing
